Speaker: Prof. Santosh Deshmukh, Faculty at D.Y. Patil College, Lohegaon. Pune, India

Yashaswi Education Society's International Institute of Management Science (IIMS), Chinchwad organised workshop on Advanced Internet Technologies on Thursday 22nd June 2023.

The workshop on Advanced Internet Technologies was organized to provide an overview of the latest advancements in internet technologies and their impact on various sectors. The workshop aimed to educate the audience about emerging trends, challenges, and opportunities in the rapidly evolving digital landscape. The objective of workshop to enhance the programming skills and industry readiness of MCA students. The Internet Technologies are very much needed to develop the website, application in the software industry.

The current research of IoT security

Geeta Patil¹, Kaveree Shinde², Pooja Magar³

MCA I year student, IIMS, Chinchwad, Pune

Abstract—In recent years, the development of the Internet of Things technology has been very rapid. However, with the explosive growth of IoT devices, the challenges facing the IoT environment are becoming more and more serious. How to ensure the security of the IoT becomes a key issue. The primary purpose of IoT security is to protect private data and ensure the security of IoT users, infrastructure, data and devices. This paper reviews the threat challenges and IoT security models at each level of the Internet of Things in recent years and discusses some of the past and future solutions. At first, the IoT security threats are systematically introduced from the perspectives of physics, network and data. In addition, the mainstream IoT security model is introduced. Then we introduce solutions to IoT threats from three perspectives, including IoT access control, intrusion detection and distribution methods. In the end, the paper introduces the current IoT security model has not formed a unified standard and expresses a future expectation for the development of future security model.

Index Terms—IoT architecture, Data security, Network security, Physical security

I. INTRODUCTION

In recent years, cybercriminals' interest in the Internet of Things has continued to grow. In the two years of 2015 and 2016 alone, a number of large-scale IoT security incidents have occurred, highlighting the Mirai and Bashlite botnets. The research and application deployment of IoT security technologies has attracted widespread attention from governments, industry and academia.

According to estimates, the number of global IoT devices will reach 8.4 billion in 2017, surpassing the global population for the first time. It is estimated that by 2020, the number of IoT devices worldwide will reach 20.4 billion. Huawei predicts that the number of IoT devices will be close to 100 billion in 2025, and 2 million sensors will be deployed every hour. Massive IoT devices give us convenience and also pose a great security threat.

IoT network security will also be a disaster area. According to statistics, in the first half of 2018, the number of malware samples collected by Kaspersky Lab for attacking smart devices was three times that of 2017, and the number in 2017 was

ten times that of 2016. Violently cracking Telnet passwords is still the most common method of self-propagation of IoT malware. In the second quarter of 2018, this type of attack was three times that of other attacks [1]. Fig.1 shows the ten countries most affected by Telnet password attacks.

Fig. 1. Telnet password attack.

In November 2015, Hong Kong toy manufacturer VTech was invaded. Nearly 5 million adult users' names, e-mail addresses, passwords, addresses and names, genders and birth-days of more than 200,000 children were accidentally leaked. In March 2017, Spiral Toys' CloudPets series of animal-filled toys suffered data breaches and malicious customer databases were maliciously invaded. The accident disclosure information includes toy recordings, MongoDB leaked data, 2.2 million account voice messages, and database extortion information. In recent years, data privacy issues have become more and more prominent, which has threatened our lives to a large extent. Information security is an important issue that needs to be solved urgently in the security of IoT.

The security is not only the basis of the development of the IoT, the most important link of the IoT technology. The purpose of this article is to provide a comprehensive
